ACCESSORIES

At Klim Aggressive Sled Wear we are avid snowmobilers who pride ourselves in designing the most advanced technical snowmobile clothing for today's aggressive riders. As ardent riders we have taken it upon ourselves to help excel the sport of snowmobiling and the products that we engineer. You will find that Klim Aggressive Sled Wear will only use the best and most innovative materials and the latest technology in our products; *lighter, faster, stronger with confidence as you push your limits in extreme conditions!*

Klim

AGGRESSIVE SLED WEAR™

VENTILATION
 For the aggressive rider controlling the elements inside your clothing is important. Zippered vents have been strategically placed in our clothing to help cool things down when you get heated up. In the parka and the jacket you will find a vent across the back and waterproof zippers underneath both arms used for ventilation. When things really heat up the side zippers of the bibs and pants can also be used to release unneeded heat.

Mtn. X-ross Jacket

The Klim Mountain/X-ross Jacket is shorter, yet mirrors the dynamic look and features of our Mountain Parka. It features all of the technical materials (Gore-Tex®) and unique ventilation system; which helps to vent unneeded heat and is unique to Klim outerwear. Its advantages include lighter weight and even greater freedom of movement for the racer and for the aggressive rider. Also, Reflective piping has been added to increase visibility on the trail.

mtn. parka

Mtn. Parka

Rugged construction and bold, crisp appearance, The Klim Mountain parka headlines our series with its waterproof, breathable Gore-Tex® fabric. Interior layers of Microtherm™ Trevira® add insulation and moisture wicking qualities. Integral to its construction is its unique ventilation system; which helps to vent unneeded heat. Reflective piping has been added to increase visibility of the rider in low light conditions. The parka boasts four large pockets and an inside wallet pocket as well. A powder skirt and draw cords are built inside of the parka for added protection. This parka will keep you warm and dry!

Mtn./X-ross Pant

Our Klim Mountain/Xross Pant is also constructed of Gore-Tex® and they feature all of the technical advantages of the bibs. However, note that they are pants designed (gusseted crotch and articulated knees) to provide maximum freedom of movement for the aggressive rider/racer. They (and we think you will agree) are the premier snowmobiling pant on the market today.

Mtn. Bib

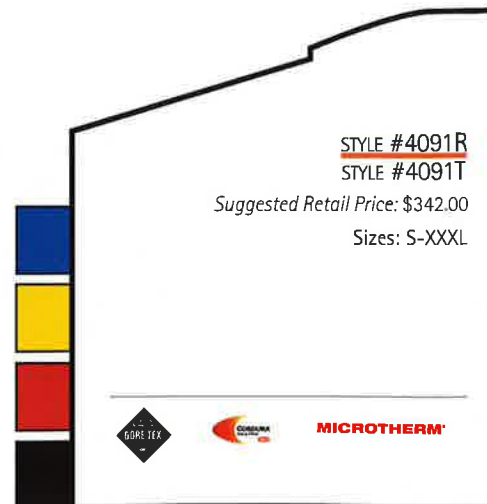

The Klim Mtn. Bib provides rugged construction that Klim has become known for. It has been designed to protect you from the elements. The crotch is "saddle" cut (gusseted) and the knees are articulated giving you the rider freedom of movement. The Klim Mountain bib features Gore-Tex®, an interior layer of fleece in the seat, and Microtherm™ Trevira® liner next to your body to wick away moisture. This Klim Mountain Bib incorporates waterproof zippers for the full length of the legs which eliminates the need for heavy zipper flaps. A knee/shin pad has also been added to give you the rider extra insurance. The Klim Mountain Bib comes in both regular and tall inseams.

Arctic Pant/Jacket/Vest

The Arctic Pant is our answer for a warm mid layer which will provide unmatched comfort and warmth. Constructed in a wide variety of colors, the pant is made of Polartec® 200 Bipolar Series fabric. In keeping with our technical approach to providing comfort in cold weather. The pant features a draw cord at the waist as well as two front pockets.

The Klim Arctic Jacket is presented in the same technical style as the Klim Mountain Parka and Jacket. It is constructed of Polartec® Bipolar 200 Series Fleece, which wicks moisture away and is breathable. This Jacket is ideal as part of your layering system under Klim outerwear. Technical features include, chin zipper protector, ventilation zippers and two hand pockets.

Klim Arctic Vest is a versatile garment which can be worn as an outerwear piece or as an insulating mid layer. It is constructed of Polartec® Bipolar 200 Series Fleece, and it reflects the same superior quality as the rest of our line.

POLARTEC

Breathability - Ability that a fabric has to transport perspiration vapor away from your body and out through the fabric, keeping you warm and dry on the inside. Breathability is just as important to comfort as waterproofness.

You will not find big bulky clothing here. Why? Klim has done away with the big bulky style of clothing that inhibits movement and deters from the breathability and function of the clothing. Klim has focused on lightweight clothing (something that has been overlooked by other manufactures until now) that is designed specifically to move with aggressive rider's movements and create an element of comfort and dryness.

The layering system is designed to keep you warm, comfortable and dry and it does it more efficiently than traditional style of dress. The trick to layering is combining the right clothes in the proper order. The goal is to trap the air warmed by your body heat while letting the moisture from your perspiration escape. You want to stay dry and warm; we want to make sure you're comfortable. Follow our winter layering suggestions and you'll enjoy staying outdoors longer because you're not cold and wet.

LAYER 1: WICKING

Your first layer needs to keep you warm and dry on the inside. And since it's closest to your skin, this means long underwear that's soft and lightweight not itchy or bulky, as wool tends to be. Cotton isn't good either, and just like wool, it dries slowly and keeps moisture buildup next to your skin. Synthetic fibers like polypropylene and polyester are comfortable and dry quickly as they pull moisture away from your skin toward the next layer, where it can evaporate.

LAYER 2 : INSULATION

As the temperatures drops or you begin to get chilled, the key to staying warm is ensuring you're well insulated against the cold. Ideally, your insulator should trap warm air while allowing moisture to ventilate. Each layer should be lightweight. When layering, add as many layers as you need to beat the cold. When you warm up, just take off a layer. Make sure your garments are easy to take on and off.

LAYER 3: THE SHELL

The outer layer is your best defense against the elements. Jackets and pants should be totally waterproof and wind-proof but also allow perspiration vapor to vent. This layer

reduces heat loss and assists the other layers at keeping you dry and comfortable. There are several performance fabrics available but only one Gore-Tex; make sure your shell is large enough to fit over the other layers. Be sure to consider your activity and the level of protection you'll need. Always choose a performance level higher than you are expecting to encounter. Backcountry winter activities come with a certain element of risk and spending the night in the elements is not uncommon. Be prepared!

Mtn. Shirt/Pant

This shirt is a jersey style pullover with a half zipper. The pants feature an elastic waist and finished cuffs. They are constructed with Polartec® Power Stretch® Series fabric which is breathable, has an anti-microbial finish and four way stretch. This fabric offers the ultimate in moisture control. It not only is breathable, but it wicks moisture away from your body. This keeps the wearer dry and comfortable, and it fits the Klim system perfectly as it provides exceptional freedom of movement and maximum moisture management.

Patterning

Klim has taken great time and effort in the patterning and sewing techniques used in our products. Incorporating the desired features into the clothing has proved to be a challenging but rewarding exercise. Features like our unique "Saddle" crotch and articulated knees in both the bibs and pants show our commitment to providing the best functioning clothing on the market. Our jackets feature articulated elbows and fitted shoulders to insure full range of movement.

With cutting edge patterning and sewing techniques Klim has been able to create the clothing aggressive riders demand.

POLARTEC® POWER STRETCH™ FABRICS
 Offers body-hugging four-way stretch with moisture management. There are two unique surfaces: the durable, non-pilling outer surface resists abrasion, while the next-to-skin soft velour pile wicks perspiration, keeping the wearer dry and comfortable.

200 BIPOLAR SERIES FABRICS
 Provide exceptional warmth without weight, as well as weather resistance. Engineered with bipolar technology, they have two unique surfaces: a durable outer layer protects you from the weather: a comfortable inner layer provides insulation. Designed to be the middle or outer layer in your layering system.

The **GORE-TEX®** membrane features an advanced composite made of two different polymers. One

is a membrane containing more than 9 billion microscopic pores per square inch. These pores let water vapor from perspiration escape, while keeping out water such as rain. Integrated into the structure is a second polymer that prevents that penetration of contaminating substances such as oils, cosmetics, insect repellents and food substances.

CORDURA® PLUS (face fabric) nylon is 2x more durable than ordinary nylon, 3x more than polyester, 4x more than polypropylene, and 14x more than cotton giving our Gore-Tex® Outerwear the durable, tear resistant, yet comfortable feel we demand from our product.

TREVIRA® MICROTHERM™ polyester, is a high performance microfiber insulation which provides essential elements of warmth, dryness, and con-

venience. With its high volume and light weight, the lining of Microtherm™ is warmer than conventional linings. It even feels warmer from the first touch because of its low thermal conductivity. The large surface area of Microtherm™ wicks away moisture faster than other linings to keep you dry. And best of all Microtherm™ is fully washable and will not shrink.
