MISSION STATEMENT

The conception of Klim Aggressive Sled Wear came from our frustration of not being able to find riding gear that met our aggressive style of riding. Everything was either too big and bulky or too lightweight and did not withstand aggressive riding. We set out to design clothing that would meet our needs and the needs of all the aggressive riders out there.

Our design philosophy is to get out and ride as much as we possibly can. Putting our designs and the materials we use to the ultimate test under the toughest conditions. We are snowmobile enthusiasts just like you who want gear that will not only keep us comfortable, but also last.

Through new technical innovations from W.L. Gore & Associates, Inc., we now bring you GORE-TEX® XCR™ outerwear — the highest performance GORE-TEX® garment.

GORE-TEX® XCR™ outerwear provides maximum performance with increased breathability to keep you more comfortable while you are active outdoors in all types of weather. This new GORE-TEX® XCR™ outerwear provides on average 25% more breathability than GORE-TEX® outerwear.

GORE WINDSTOPPER™ Soft Shell the latest technology from W.L. Gore & Associates, Inc. is totally wind-proof, water resistant and very breathable. WINDSTOPPER™ Soft Shell Garments combine the reliable protection of a shell with the comfort of a midlayer. These garments keep the rider comfortable, protected and will replace traditional bulky, restrictive layers.

WARRANTY

We warrant every product we make to be free of manufacturer defects. Should you have a warranty issue, return the item to us. We will repair it if possible or replace all valid warranty items. Please clean your product before returning it to us or cleaning charges must be assessed before review can be made. We don't like stinky products. Normal wear and tear, modifications, alterations, negligence, damage and use for a purpose other than for which it was designed, are not covered by Klim's warranty.

Fabrics:

SHELL:
 GORE® WINDSTOPPER® Soft Shell

Our Inversion Jacket has created a new breed of clothing for the snowmobile industry. This is a piece of clothing that has a dual purpose. First due to its high breathability and great heat retention it will work as a mid-layer piece that you can add to your layering system. Secondly because of the nylon face fabric and due to the fact that it is 100% windproof and water resistant you can wear it as an outerwear piece.

Price: PowerXross \$69.99
Togwotee \$69.99

The PowerXross is the result of the time and effort spent working with our factory and testing in the field to create a better product. The PowerXross Glove is truly the ultimate in light-weight gloves without compromising durability and waterproofness. The PowerXross Glove is the answer for those that are looking for a waterproof motocross style glove. The glove is waterproof and breathable which is made possible through the use of Gore-Tex®. Durability is achieved by using a double reinforced synthetic leather palm. Other features such as wrap around fingertips add to the longevity of the gloves.

POWERXROSS GLOVE
style #3038
Sizes: M-2XL Color: Black / Red / Blue
Price: \$69.99

TOGWOTEE GLOVE
style #3037
Sizes: M-2XL Color: Black / Red / Blue
Price: \$69.99

A next generation of glove, the Togwotee Glove will gain the respect of all who wear it. Yes, the Togwotee has some of the same features as its predecessor the Detonator, but has been resized and reworked to be the best glove on the market. Aggressive riders will find that the Togwotee Glove will be one of the most versatile pieces in their bag.

The Togwotee Glove features rugged materials to increase the durability of the product. These gloves have been constructed of corded nylon on the back of the hand for durability and for added insulation. Rubber Tec has been added to the palm to give maximum grip. We have also added a gusset to the palm to increase the dexterity of the glove. Waterproofness and breathability is achieved by using Gore-Tex inserts.

KODIAK BAG style #3113
Color: Black Price: \$139.99
KODIAK BAG —
Features:

- Helmet compartment
- Boot compartment
- Main compartment w/tear away divider
- 2 Roomy inside accessory pockets
- 2 External accessory pockets
- 4 Grab handles
- Inline skate wheels

NAC PACK style #3117
Color: Black Price: \$79.99

TEAM GEAR BAG style #3013
Sizes: One size Colors: Black Price: \$69.99

The Team Gear Bag is the perfect size for carrying all your goodies for a day or two of riding. Measuring 38" long x 16" tall x 14" wide, one end is for boots, the other, a lined helmet bag. The center section will fit your outerwear, a few layering pieces, and room for a few extra's. Easy to carry and priced right too!

RADIUM BOOT — The next generation, of boot the Radium Boot, boasts some of the same great features of its predecessor the Velocity Boot like increased ankle support, stiff sole, secure fit, and added protection from foot and ankle injuries

The Radium Boot incorporates a new lacing system that uses our HRS™ technology which creates increased leverage with the laces to insure a secure fit. The removable liner is redesigned with plusher fabrics on the inside to create a more comfortable fit right out of the box. The liner also gets an upgrade with our HRS technology which works in conjunction with the outer boot to insure a proper fit and support.

The sole of the boot has been designed to be a durable sole using different materials that have better traction, more protection and increase shock absorption.

Overall the Radium is a lower profile boot that you will find to be extremely comfortable, great performing, and will work for trail riders, racers and mountain riders alike.

Features:

- Heel Retention System (HRS™) creates a more secure fit
- 3 material composite outsole increases comfort, shock absorption, and protection
- Wrap around outsole for abrasion resistance
- Rubber heel and toe cap for added protection
- Extended rain gutter that extends the full length of the boot and protects feet from outside moisture
- Removable lacing liner with HRS™ technology
- Back of boot is cut out to relieve pressure on calf

LAYERING. THE SMARTER WAY TO DRESS

For aggressive riders being able to stay comfortable means dressing in layers. Riding conditions, temperature, level of activity and riding style are all factors that are constantly changing directly affecting your level of comfort. The layering system is a flexible system that allows you to not only dress for one type of condition, but to dress comfortably for a wide range of changing conditions.

There are three components to the layering system and each works together to create a complete system.

- **BASE LAYER**
- **MID-WEIGHT LAYER**
- **OUTER LAYER**

LAYER 1
BASE LAYER

The first layer needs to keep you warm and dry on the inside. And since it's closest to the skin, this means long underwear that's soft and lightweight

not itchy or bulky, as wool tends to be. Cotton isn't good either, and just like wool, it dries slowly and keeps moisture buildup next to the skin. Synthetic fibers like polypropylene, fleece and polyester are comfortable and dry quickly as they pull moisture away from your skin toward the next layer, where it can evaporate.

Klim's Base Layer:

Features four different pieces that fit into the base layer category our Aggressor Shirt, Revolt Jersey, and the Inferno Shirt and Pant. These pieces work both in transporting moisture away from your body and in keeping you warm.

LAYER 2
MID-WEIGHT

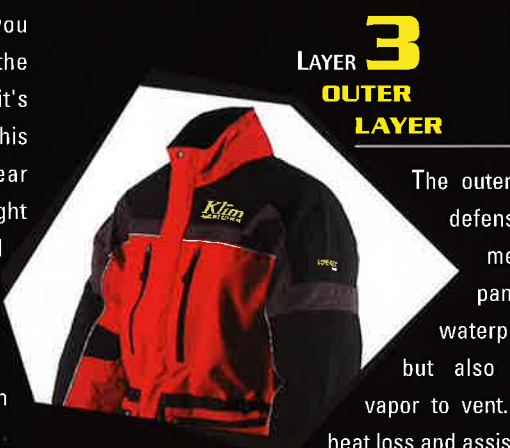

As the temperature drops or you begin to get chilled, the key to staying warm is ensuring that you are well insulated against the cold. Ideally, the insulator should trap warm air while allowing

moisture to escape. Each layer should be lightweight. When layering, add as many layers as is needed to beat the cold. When it warms up or your level of activity increases, just take off a layer. Make sure that the garments are easy to take on and off. Individuals who run at a hotter temperature are often happy with the Inferno Shirt and Pant for insulation.

Klim's Mid-Weight Layer:

Our Mid-Weight Line-up consists of our Rubicon Pant, Everest Jacket, Vest, and our new Inversion Jacket. All four pieces provide excellent warmth without the unneeded bulk and are made from synthetic fabrics which will not hold onto moisture.

LAYER 3
OUTER LAYER

The outer layer is your best defense against the elements. Jackets and pants should be totally waterproof and windproof but also allow perspiration vapor to vent. This layer reduces heat loss and assists the other layers at

keeping the rider dry and comfortable. There are several performance fabrics available but only one carries the Gore-Tex label. When selecting size make sure the shell is large enough to fit over the other layers. Be sure to consider your activity and the level of protection you'll need. Backcountry winter activities come with a certain element of risk and spending the night in the elements is not uncommon. Be prepared!

Gore-Tex

Gore-Tex is the membrane that is laminated to a surface fabric. It is an extremely thin, lightweight membrane that is the most waterproof and breathable fabric available at any cost today. Gore-Tex fabric is durably waterproof and will remain waterproof for years, even after laundering, flexing or abrasion.

The Gore-Tex membrane features an advanced composite made of two different polymers. One is a membrane containing

more than 9 billion microscopic pores per square inch. These pores let water vapor from perspiration escape, while keeping out water such as rain. Integrated into the structure is a second polymer that prevents that penetration of contaminating substances such as gasoline, oils, cosmetics, insect repellents and food substances.

"Breathable" means that perspiration vapor is transported away from your body and out through your clothing, keeping you dry on the inside. Breathability is just as important to comfort as waterproofness.

Arctic Fleece 300 Anti-Pilling Fabric

Has dual sided finishes, a berber finish on the inside creates a superior warm barrier while the outside velour finish creates a clean look. Arctic Fleece offers superior warmth to weight ratio, excellent water vapor transmission, and is also breathable.

Soft Shell

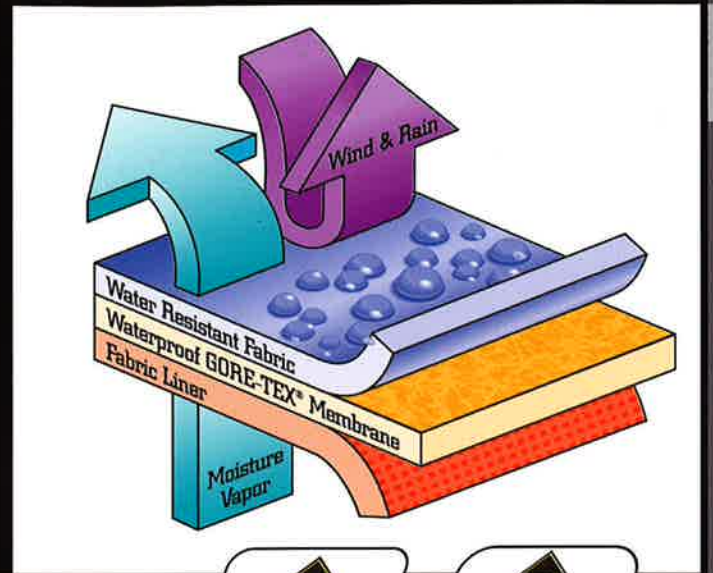

Totally windproof, water resistant and very breathable, WINDSTOPPER® Soft Shell Garments combine the reliable protection of a shell with the comfort of a midlayer. These garments keep riders comfortable without the need for bulky, restrictive layers.

Yukon Fleece™ 4 X 4 Stretch fabric

Offers a superior warmth to weight ration, excellent water vapor transmission and breathability. The velour side is engineered to create thousands of air pockets that trap air, thus creating an excellent insulation zone. The polyester velour backing will keep the wearer warm and the outer nylon face provides excellent abrasion resistance.

Electrostatic Comfort Control EC2 QWIK-DRI

Klim's Aggressor Shirt with Electrostatic Comfort Control EC2 QWIK-DRI process is a revolutionary development in technical primary layering products that promotes peak performance by allowing the wearer to maintain a thermal equilibrium. The Electrostatic Comfort Control EC2 QWIK-DRI improves performance, comfort and enjoyment by providing the most advanced moisture management and thermal regulation technology available.
