# OPTIMIZING TRACTION AND CONTROL

	SKIS	CARBIDES	TRACK/STUDS
<b>MOUNTAIN</b>	Add Gripper Skis for a deeper keel, greater flotation, and positive steering in deep, loose snow.	For added trail capability, use 10.2 cm carbides.	Run a deeper lug and more aggressive track pattern to accommodate softer, deeper snow.
<b>CROSSOVER</b>	Choose PRO-Steer Skis if you prefer more trail riding or Gripper Skis if you use trails to get to your next jump-off point.	For improved cornering without compromising deep-snow performance, use 15.2 cm carbides.	Choose a track with a lug depth between 3.4 and 4.4 cm. If you ride off-trail more, choose the lug depth that works for the depth of snow.
<b>TRAIL</b>	For true trail performance, add the Polaris Engineered™ PRO-Steer Ski—specially designed with a low-profile keel.	Dual-runner carbides like the Dooly or Slim Jim reduce darting while increasing corner performance and stability in and out of the apex.	Choose a track based on your sled's rail length and add the number of studs based on your sled model and whether you're a trail, performance, or intermediate rider.

## CARBIDE WEAR STRIPS

Carbides need to be replaced periodically due to normal wear and use. Rocks, cement, pavement, and road crossings all contribute to carbide wear.

## CHOOSE YOUR LENGTH

3" - 4" CARBIDE

- Perfect for sleds with a 121" track with 96 studs or less or sleds with 2.5 cm lugs taking corners at moderate speeds.

6" CARBIDE

- Ideal for sleds in the 136" track range with up to 3.175 cm lugs or shorter track sleds with more than 96 studs.

8" CARBIDE

- Best for ultimate performance sleds with a 144" track or longer with paddles and/or the maximum amount of studs.

# STUDS

RIP WITH AN **IRON GRIP**: Track studs allow you to dominate terrain as far and as fast as you can see. The right stud improves acceleration, braking, steering, and control, especially on hard-packed snow and ice. The more aggressive your riding style, the more traction your sled needs to perform at its best.

### CHOOSING THE RIGHT STUD

1. Determine your riding style and terrain.
2. Find sled model info and number of studs required.
3. Determine length of turning carbides to balance traction and steering.
4. Make sure the studs won't interfere with your tunnel or cooling system.

\*Belt dimensions are given in nominal dimensions. There is a +/- variance for all critical dimensions. Clutch setup must be inspected when a new belt is installed and should be adjusted if necessary. The drive belt is an important component in the CVT system. In order to achieve maximum efficiency from the converter, drive belt deflection (tension), clutch offset, and alignment must be adjusted properly. See your Service Manual for further details on drive belt measurement inspection.

## GET THE PERFECT FIT

**MEASURE**

Measure the circumference here for correct size. Make sure the inner lining fits snugly around your head without causing pain.

**MOVEMENT**

Move the helmet side to side. Your scalp should move with it.

**CHINSTRAP**

Check with your finger. If properly fit, your finger shouldn't fit between your chin and the strap.
