TECH54

TECHNOLOGY TO

**CONQUER
THE RIDE.**

ELEVATE YOUR RIDE
WITH EXCLUSIVE
TECH54 RIDING GEAR
DESIGNED TO KEEP
YOU WARM AND DRY.

To us, winter is more than just another season. It's when the landscape is frozen by an icy grip and snow transforms terrain into an endless playground. Like you, we savor every minute, which is why our Apparel Center of Excellence developed TECH54—a waterproof, breathable membrane featured in every Polaris jacket, bib and monosuit. This exclusive technology allows perspiration to escape and keeps water out, so no matter how you ride, or where you ride, you stay dry, warm and comfortable.

- 
- Heat and sweat escape
 - Water stays out
 - Tailored for how you ride
 - Stay dry, warm and comfortable

- Choose your TECH54 rating based on the weather conditions and your level of exertion
- Choose **5K/5K** for colder & drier conditions and moderate activity
- Choose **10K/10K** for extremely wet riding conditions and high-activity riding

TECH54 is featured in all Polaris jackets, bibs and monosuits including men's, women's and youth. Look for the TECH54 logo when shopping at your local dealer or online.

FOUR KEYS TO TRACK SELECTION

LENGTH

The inside circumference of the track is calculated as the drive pitch multiplied by the number of track segments. It must be correct to the nearest inch for proper fit without additional modifications to the skid frame.

DRIVE PITCH

The drive cog center distance around the circumference of the cogs on the drive axle. It must match the existing track or the drive cogs must be changed.

- 2.52" drive pitch primarily machines manufactured before 2007
- 2.86" drive pitch especially on recent models manufactured after 2007
- 3" and new 3.5" drive pitch for lowest weight on select mountain sleds

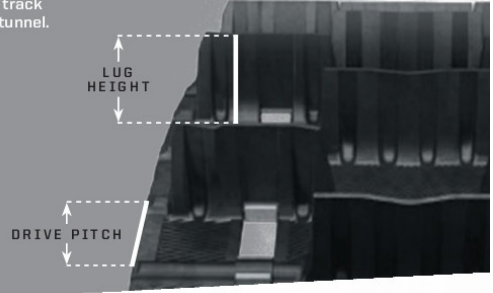

WIDTH

The measurement across the track governed by the width of the tunnel.

LUG HEIGHT

The distance lugs extend above the track surface.

- Trail: 1" - <1.5"
- On/Off Trail: 1.5" - <2"
- Deep Snow: 2" and greater

FIELD TESTING

WHAT COUNTS IN OIL TESTING:

1. Does it protect the engine at low temperatures?
2. Does it protect the engine from high heat wear?
3. Does it keep the engine clean?

PISTON CHECKPOINTS

PISTON DOME: Is it clean? Clean burning oil and our proprietary detergency system prevents carbon buildup and hot spots, which extends piston life and maintains optimal run quality.

PISTON RINGS AND RING LANDS: Are they free of carbon deposits and soot? This is important to preserve ring seal and maximum power output.

PISTON PINS AND NEEDLE BEARINGS: Proper viscosity and lubricity, film strength and our proprietary additives provide exceptional protection and heat control, maintaining proper pin and bearing tolerances and performance.

PISTON SKIRT: Is the Grafal coating scratched or visibly damaged? Harsh contact between the cylinder and piston due to insufficient lubrication would eventually result in engine failure.

ENGINEERED TO MAXIMIZE THE LIFE OF YOUR RIDE

All Polaris® fluids—from anti-freeze to brake fluid—are developed for your vehicle. Trust the only fluids perfectly engineered for your needs.

*Belt dimensions are given in nominal dimensions. There is a +/- variance for all critical dimensions. Clutch setup must be inspected when a new belt is installed and should be adjusted if necessary. The drive belt is an important component in the CVT system. In order to achieve maximum efficiency from the converter, drive-belt deflection (tension), clutch offset and alignment must be adjusted properly. See your Service Manual for further details on drive-belt measurement inspection.
