SCANDINAVIA VERSION

POLARIS

THE ORIGINAL SNOWMOBILE CO

When you're on the snow, there are no boundaries, only possibilities. Every flake, every ride—originality in all its glory. Creating a boundless canvas for your signature sledding style. A blank page on which to pen fresh stories and put forth traditions that endure for generations. Snow. Wherever it lands, that's our true north—pure and simple. So, make it rip, make it float, make it fly, make it climb, make it wild, make it count, make it your own. Because winter is short and memory is long. And while there are easier ways to live, on snow we thrive and have since 1954.

RIDER FIRST DESIGN

REDEFINING THE WORLD'S BEST MOUNTAIN SLED

**EFFORTLESS CONTROL
 IN ANY CONDITION**

The RMK Matryx platform features a next-level rider interface. A sculpted cockpit, narrow seat and tapered tunnel combine to deliver superior rider connection delivering ultimate control in all terrain.

**UNMATCHED DEEP SNOW
 PERFORMANCE**

The patented architecture of the RMK Matryx platform delivers instantaneous lift and lightning fast response. The tapered low drag tunnel and Polaris-exclusive tracks lift the lightweight chassis on top of the snow, and the low-inertia QD drive system creates instant response.

**THE MOST ADVANCED
 TECHNOLOGY ON SNOW**

With innovation built around the rider, the RMK Matryx platform takes you places you only dream about. From the centralized cooling system to the QD2 drivetrain and the integration of the available 7S Display with Ride Command, the RMK Matryx is the most advanced sled on the mountain.

MATRYX RMK FEATURES: UNMATCHED DEEP SNOW PERFORMANCE.

MATRYX RAISED PLATFORM

Designed to increase clearance and reduce drag to keep you on top of the snow. It's purpose-built for mountain riding and allows for improved side hilling, faster and easier climbing, and instantaneous lift allowing the sled to pop onto the snow faster.

QUICKDRIVE DRIVE SYSTEM

The lightest drive system in the industry for the ultimate dynamic agility. Available in QuickDrive or QD2, which has a 10% gear reduction for even quicker response.

ADJUSTABLE TOE HOLDS

The RMK Matryx features adjustable toe holds that can be set to three different sizes to accommodate all boot sizes and rider preferences.

MATRYX SLASH RMK FEATURES: SLASH THE WEIGHT. SLASH THE DRAG.

SLASH TAPERED TUNNEL

The Matryx Slash features a short, tapered tunnel that has significantly reduced drag through the snow. Allowing the track more traction in the deep. Through drag reduction, the control of the sled is greatly enhanced by keeping the sled out of the snow.

PATRIOT ENGINE CHOICES

The Slash models give you exclusive engine options. Choose from the powerful and proven 850 Patriot, the race-mod response of Patriot 9R, or the Patriot Boost with industry-leading power. The RMK KHAOS Slash 146 is also available with the 650 Patriot.

SHORTENED COOLING SYSTEM

The centralized cooling system on the RMK Matryx platform delivers improved cooling capability while reducing snow and ice buildup.

LAKE ROCKET? NO... IT'S MORE LIKE A LAKE, TRAIL, FOREST ROAD, EMPTY-THE-ENTIRE- WATERING HOLE ROCKET.

WHEN WE SET OUT TO BUILD THE NEXT GENERATION OF GO FAST SLEDS, WE WEREN'T GOING TO SETTLE ON A ONE-DIMENSIONAL SLED.

The idea of go-fast, lake racer sleds certainly isn't new. These muscle sleds have been out chasing top speed on the lake for the better part of 30 years, all sharing one key characteristic: weight. These heavy sleds are reluctant to take on anything other than a straight line - and that was a compromise we weren't going to take.

Enter the first no compromise Hypersled: Patriot Boost INDY VR1 and Switchback Assault. Built with the industry's most powerful OEM 2-stroke turbo engine, the lightweight rocketship is ready to take on the frozen lakes, twisty trails, and untracked forest roads alike. 10% more horsepower than the 850 Patriot and up to 110 pounds lighter than our competition, all

built on the rider first Matrix platform. Get ready for an all new Hypersled experience.

FOUR KEYS TO TRACK SELECTION

LENGTH

The inside circumference of the track is calculated as the drive pitch multiplied by the number of track segments. It must be correct to the nearest inch for proper fit without additional modifications to the skid frame.

DRIVE PITCH

The drive cog center distance around the circumference of the cogs on the drive axle. It must match the existing track or the drive cogs must be changed.

WIDTH

The measurement across the track governed by the width of the tunnel.

LUG HEIGHT

The distance lugs extend above the track surface.

- Trail: 1" - <1.5"
- On/Off Trail: 1.5" - <2"
- Deep Snow: 2" and greater

KEY POINTS OF PROTECTION

PISTON

Pistons play a critical role in engine operation and the wrong oil can lead to power loss, scuffing and poor performance.

- Maximizes power output while providing excellent film retention to prevent scuffing
- Superior stability in high temperatures, while minimizing carbon deposits and increasing long term reliability
- Oil flows at low temperatures to prevent hard starting

CRANKSHAFT BEARING

Provides hydrodynamic barrier on bearing interfaces to extend upper and lower rod bearing life.

- Provides accurate oiling under extreme cold conditions
- Excellent film retention and heat transfer properties
- Corrosion inhibitors protect during off-season storage

EXHAUST VALVE OPERATION

Exhaust valves control power output during on and off throttle use. Improper lubricants can cause carbon buildup and sticking of valves, reducing power.

- Provides detergency over the life of the exhaust valves
- Minimizes carbon buildup to ensure exhaust valves continue to move freely and keep the engine running at peak power
- Designed to provide smooth valve operation throughout the life of the engine

FIELD TESTING

WHAT COUNTS IN OIL TESTING:

1. Does it protect the engine at low temperatures?
2. Does it protect the engine from high heat wear?
3. Does it keep the engine clean?

PISTON CHECKPOINTS

PISTON DOME: Is it clean? Clean burning oil and our proprietary detergency system prevents carbon buildup and hot spots, which extends piston life and maintains optimal run quality.

PISTON RINGS AND RING LANDS:

Are they free of carbon deposits and soot? This is important to preserve ring seal and maximum power output.

PISTON PINS AND NEEDLE BEARINGS:

Proper viscosity and lubricity, film strength and our proprietary additives provide exceptional protection and heat control, maintaining proper pin and bearing tolerances and performance.

PISTON SKIRT: Is the Grafal coating scratched or visibly damaged? Harsh contact between the cylinder and piston due to insufficient lubrication would eventually result in engine failure.

*Belt dimensions are given in nominal dimensions. There is a +/- variance for all critical dimensions. Clutch setup must be inspected when a new belt is installed and should be adjusted if necessary. The drive belt is an important component in the CVT system. In order to achieve maximum efficiency from the converter, drive-belt deflection (tension), clutch offset and alignment must be adjusted properly. See your service manual for further details on drive-belt measurement inspection.
