ROTAX ACE™ 4-STROKE ENGINES

With the Advanced Combustion Efficiency (ACE) family of engines, BRP engineers optimized the combustion system, reduced mechanical friction and freed intake and exhaust breathing. The result is the most efficient engine in snowmobiling. Not only are they efficient, they're a pleasure to operate and own. Very little maintenance is required; they run smoothly and produce a nice, solid—yet quiet—sound.

INTELLIGENT THROTTLE CONTROL

Standard on the ACE engines, the iTC™ system delivers a whole different snowmobiling experience.

- **Driving Modes:** Standard mode ensures a smooth start and linear acceleration; Sport enables full performance and quicker acceleration; ECO® limits top speed and acceleration rates for a more relaxed, fuel-conserving ride.
- **Finger Throttle:** The throttle block can be rotated forward for use as a finger throttle, if preferred. Great for changing hand positions on a long ride and for more control through bumps.

1 Observed metric horsepower based on internal dyno test performed in optimal conditions.
2 Data based on internal engineering trail testing.
3 Data based on internal engineering trail testing in ECO mode.
4 Based on retail sale results as of December 31, 2025.

STACKABLE LinQ DECK ACCESSORY COMPATIBILITY CHART

Level up and double your storage with the Stackable LinQ Deck. Carries up to 50 lb (22 kg) of gear by duplicating positions 1 and 2 of the tunnel area 14.75" (375 mm) above it. The composite construction uses steel, aluminum and polypropylene in a robust design for long life. When the secure latch system is released, the deck is held open by a gas strut for easy access to the cargo below it. Depending on seat configuration, accessories can be left on the deck when opening.

// SKIS

Skis make all the difference in getting your sled to handle just how you like. We offer eight different styles of skis for you to choose from. Which one is right for you? Here are some tips on choosing the right one:

PLATFORMS: REV GEN5 / REV GEN4 / XP / XR / XU / XS / XM / REV

TOURING		**PILOT 5.7 SL** 2 carbides/ski	• Lightweight single or dual runner skis provide effortless steering at low speeds and constant grip without compromise at higher speeds. • Standard use is one carbide runner—add a second to reduce darting. • Great all-around trail performance.
UTILITY		**PILOT 7.4** 1 carbide/ski	• Specifically designed for utility purposes. • Deeper keels allow more control while towing. • Increased tip-up rear end for better reverse capability. • 1" wider than Pilot DS-2 for improved flotation in deep snow. • More aggressive cornering while keeping a light steering feeling.
TRAIL SPORT		**PILOT 5.7** 1 or 2 carbides/ski****	• Lightweight single or dual runner skis provide effortless steering at low speeds and constant grip without compromise at higher speeds. • Standard use is one carbide runner—add a second to reduce darting. • Great all-around trail performance.
		**PILOT X** 1 carbide/ski	• Completely redesigned from Pilot 5.7 with a new structural topside for 10% more rigidity. • 31 mm longer keel with a new shape reduces darting. • Adds 10% more lateral surface area and blends more smoothly with a new carbide. • 11 degree reduction in approach angle.
		**PILOT TX** 1 carbide/ski	• Improved to better match the REV Gen4 features. • Redesigned top side for increased rigidity. • 20 mm shorter overall length and more dramatic tip-up at the rear. • 63 mm longer runner plate increases lateral surface for more effective cornering. • Smoother front approach angle to reduce darting even further.
		**PILOT RX** 1 carbide/ski	• Remarkable cornering predictability in various snow conditions and exceptional control in loose snow.
TRAIL PERFORMANCE		**PILOT R** 1 carbide/ski	• Straight from the MXZ X 600RS race sled. • Very aggressive profile for sharp handling. • Lightweight with high rigidity. • Proven on the ISOC race circuit.
DEEP SNOW		**PILOT DS-2** 1 carbide/ski	• Evolution of the DS with a deeper and shorter keel. • Increased agility and less effort than the original. • Great all-around ski for deep snow use. • Standard on mountain sleds with 2.5" lug tracks and utility sleds.
		**PILOT DS-3 REV Gen4***** 1 carbide/ski	• Deep snow ski designed to match the latest 3" lug and longer tracks. • 0.47" (12 mm) deeper keel than DS-2. • Works well for aggressive riders using the biggest tracks.
		**PILOT DS-4** 1 carbide/ski	• 2-stage keel design improves flotation. • Entire keel has been moved forward with a revised rear portion for improved consistency in deep snow and straighter tracking in rough conditions.

***Does not fit REV Gen4. ***Fits only REV Gen4. ****Second carbide can be added to ski by drilling marked additional holes.*
Note: The use of aggressive skis, ski carbide runners or studs will alter the handling of your snowmobile, particularly in terms of maneuverability, acceleration and braking. Please refer to your Operator's Guide for more details.

To install the studs, always use the installation tools, procedures and torque specified in the instructions. Proper installation provides maximum product longevity and helps prevent track damage. BRP recommends that studs be installed by authorized BRP dealers and on approved pre-patterned tracks only. These tracks come standard on most Ski-Doo snowmobiles. Look for this symbol on your track. Woody's products are designed to fit and interact with each other. The stud nut and support plate form a complete unit. The use of aggressive skis, ski carbide runners or studs will alter the handling of your snowmobile, particularly in terms of maneuverability, acceleration and braking. Please refer to your Operator's Guide for more details.

WHAT MAKES BRP DRIVE BELTS STAND OUT?

PERFECTLY ENGINEERED FOR YOUR RIDE

BRP drive belts are developed alongside each vehicle to perfectly match drivetrain calibration and deliver maximum performance. Designed, tested and manufactured to rigorous specifications, BRP drive belts also deliver superior throttle response and no RPM loss.

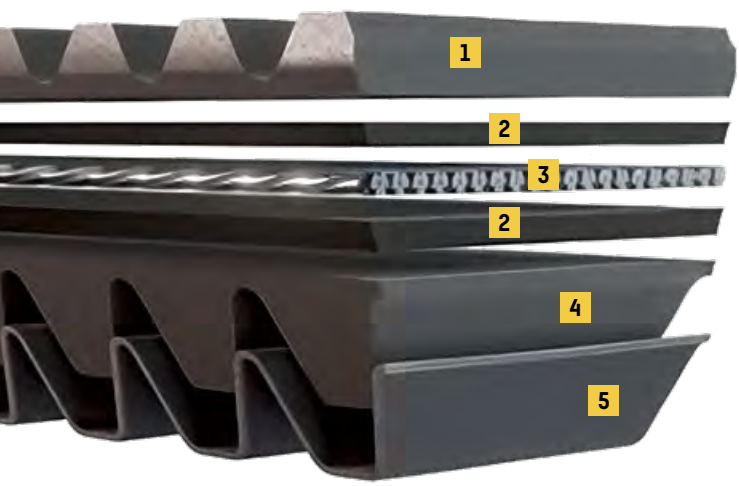

PROVEN WINNERS

In addition to the countless hours of dyno and physical field-testing we do on every drive belt, we go racing, where every component is stressed to the maximum. For years, Ski-Doo racers have been winning countless events across the globe. Underneath all the trophies and champagne? A BRP drive belt.

ADVENTURE WITH CONFIDENCE

Performance means little without durability, and our manufacturing consistency assures you'll get the most out of every adventure. Extra miles equal extra memories, and BRP drive belts are engineered to deliver maximum longevity for your ride.

SUPERIOR CONSTRUCTION

1 The top cog adds strength and reduces belt deformation. It's typically made with a different compound than the lower cog nearest the clutch center as the two are designed to perform different tasks in transferring power to the track.

2 Adhesion layers. These promote adhesion from the cogged undercord compound to the aramid cord.

3 BRP belts use tensile cord made with lightweight, high-strength, high-resistance aramid fibers. Each tensile cord layer in BRP belts is specific to the diameter required by the power and performance needs of your vehicle.

4 The undercord compound is a carefully curated compound of both natural and synthetic rubbers and high-performance materials. Intentionally designed for the proper flex and engagement profile of your clutch pulleys.

5 Specially designed impregnated fabric provides additional wear resistance to both the belt and your clutches.

CVT MAINTENANCE PARTS

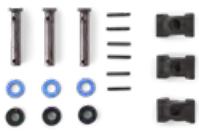

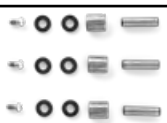

PERFORMANCE DRIVE BELTS

- High performance drive belts calibrated to maximize your sled's performance.
- Aramid tensile cords used in construction for extra long life and dependability, also deliver a consistent length with minimal belt shrinkage and minimal length adjustments.
- High tensile reinforced fiber elastomer undercords provide minimal dusting and long term flex life.
- Flexweave overcord for superior adhesion and crack resistance.
- Consistent performance during life of belt.
- Quality you can count on for optimum performance.
- Built with distinctive durability features for mountain, trail or fast tracks.

QRS XD ROLLER KIT		861805577	

- High resistance to wear and shattering from aggressive shifting.
- Unique formula prevents deformation for consistent performance.
- Precise roller tolerances which are critical to prevent roller seizure and premature wear to key components.
- Includes 2 rollers.

DEFORMATION RESISTANCE UNDER STATIC COMPRESSION TEST

BRP XD roller

The **BRP XD roller** withstands 4 times the load in compression compared to most popular aftermarket thermoplastic-type rollers with a displacement/ deformation of 0.5 mm.

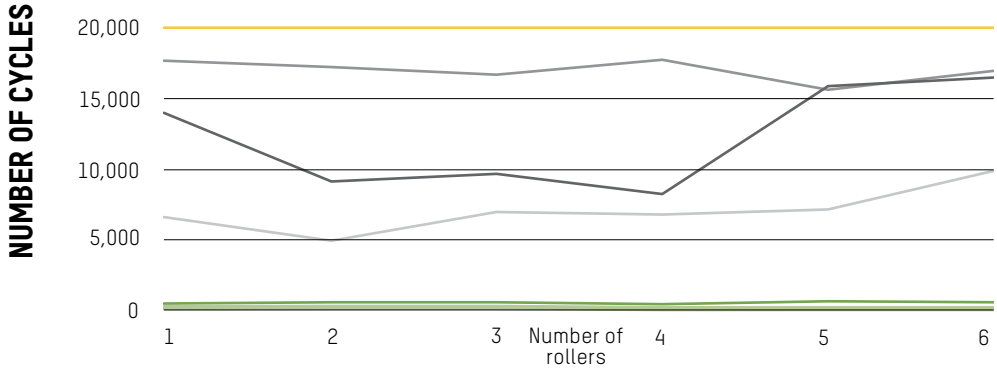

QRS XD rollers are built to take a beating. With more impact resistance and less deformation than standard designs, they hold up under pressure, protect belt performance, and keep the pulley system running clean and smooth, ride after ride.

BUILT TOUGH TO KEEP POWER MOVING

Stronger than fiber rollers and more stable than thermoplastic designs, QRS XD rollers resist high-impact shocks and deformation that can seize pulleys or shred belts. A major upgrade for reliability, durability, and consistent performance under stress.

CYCLING TEST

BRP XD Roller

Thermoplastic Type Sample 3

Thermoplastic Type Sample 2

Thermoplastic Type Sample 1

Fiber Type Sample 2

Fiber Type Sample 1

The **BRP XD rollers** performed 40% more cycles* than the average for thermoplastic-type rollers and 99% more cycles* than the average for fiber-type rollers. Both thermoplastic and fiber roller tests ended in failure.

*Based on 20,000 cycles of our XD rollers, without any signs of failure.

NGK† SPARK PLUGS

- You'll see a difference with genuine NGK spark plugs.
- Solid steel terminal reduces the chance of arcing in the plug cap, which may interfere with the electric component.
- A necessity in today's ignition systems.

E-TEC MAX
FULL SYNTHETIC OIL

XPS®

All 2 stroke oils are the same? E-TEC oils have proved that wrong ever since they touched a piston for the first time. Fueled by the 600RR engine, E-TEC takes a new form with the launch of MAX Technology—less smoke, less smell with MAX performance and superior protection, even with less oil.

MOLYBDENUM

Pure Moly is a new generation of molybdenum (MO2S) friction modifier, a premium additive that greatly boosts lubrication performance.

Our unique Pure Moly additive delivers exceptional friction reduction and anti-wear protection by forming a low-friction protective film on metal surfaces. Pure Moly minimizes energy loss, reduces component wear, and extends engine life.

ASHLESS

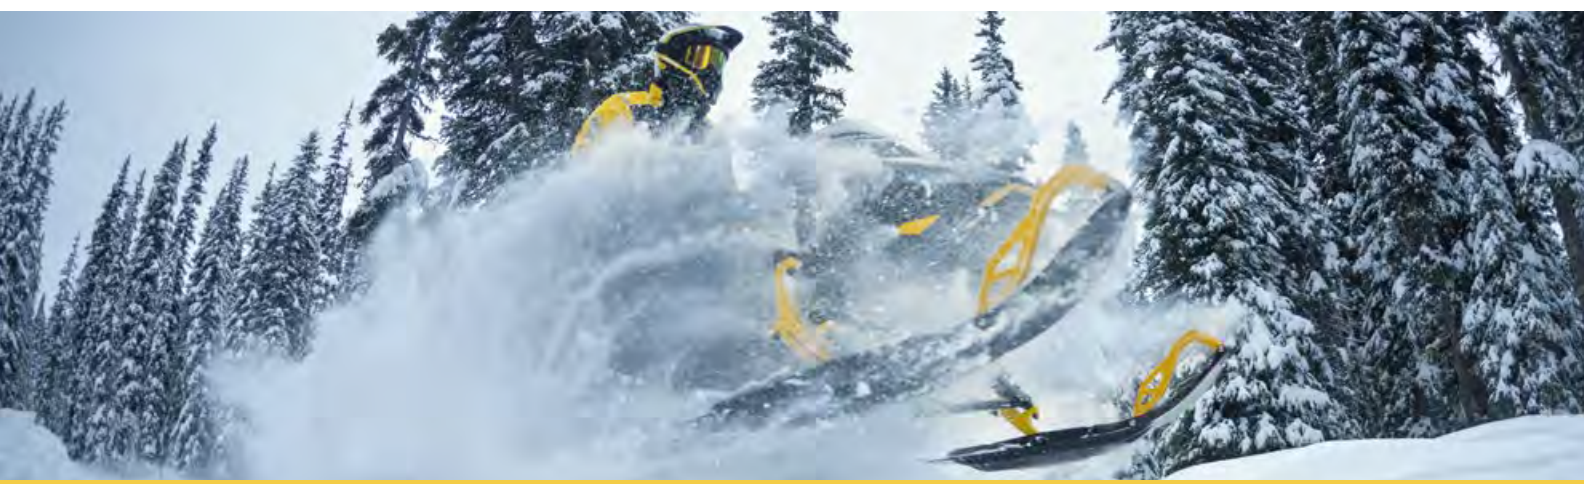

Purpose-built, high quality, and non-metallic, the Ashless formulation is designed to clean out existing carbon deposits and prevent new ones from forming. Works by neutralizing and protecting against harmful acids produced by combustion.

E-TEC MAX keeps RAVE valves cleaner and prevents carbon buildup. Maintains higher levels of compression, thus power and performance. The technology also works against moisture from ethanol fuel and storage, keeping engine parts corrosion and rust free.

XTREME

Precisely crafted full synthetic 2-stroke engine oil using innovative additives. The E-TEC MAX smokeless formula pprovides the perfect balance between performance, protection and engine cleanliness.

E-TEC MAX Technology significantly reduces smoke, smell and deposits, while maintaining performance and protection.
